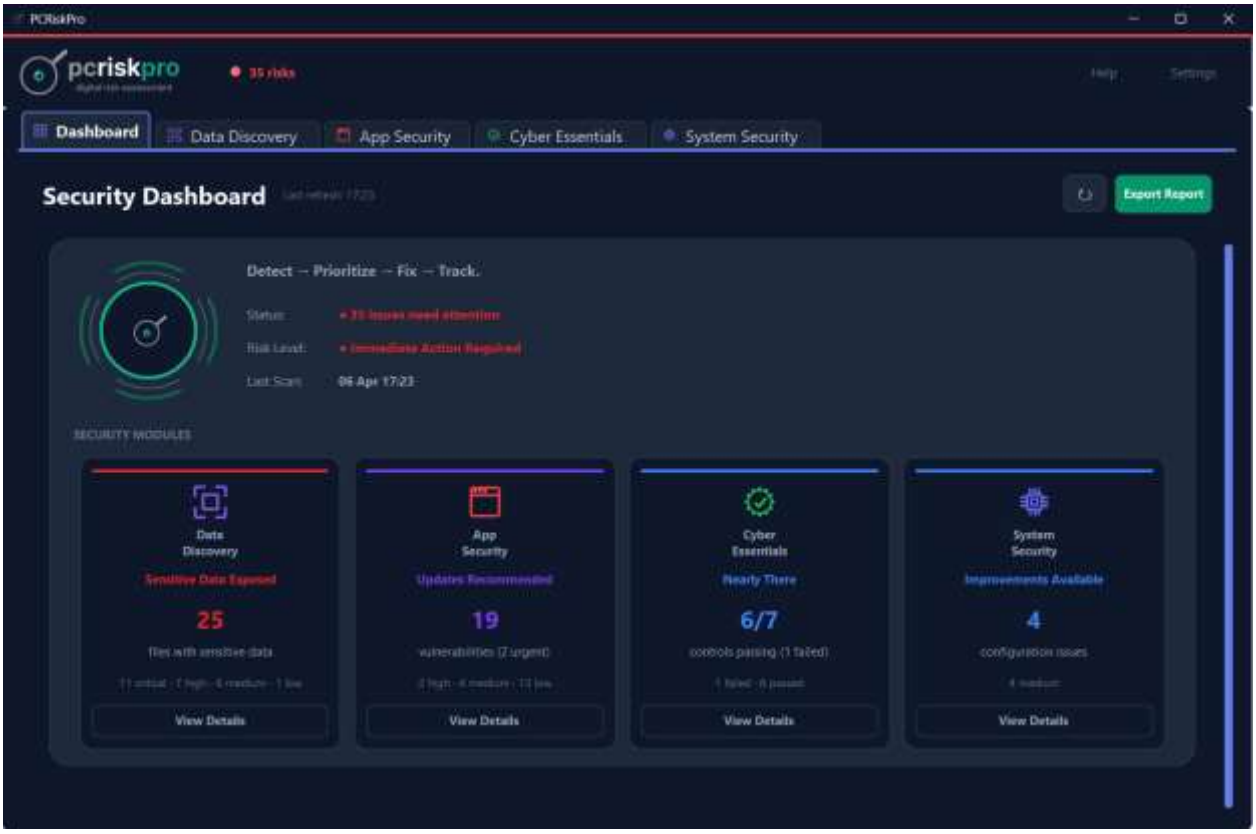
# Enterprise Security Risk Assessment for SMEs

## *Detect. ⟶ Prioritize ⟶ Fix ⟶ Track.*

PCRiskPro is a professional Windows desktop application that provides automated security risk assessment across four critical domains: sensitive data discovery, application vulnerability scanning, UK Cyber Essentials compliance, and system security configuration. Designed for SMEs, MSPs, and IT consultants who need enterprise-grade security insights without enterprise-grade complexity or cost.



*Security Dashboard with weighted risk scoring across all four modules*

## AT A GLANCE

## FOUR SECURITY MODULES, ONE UNIFIED SCORE

PCRiskPro assesses your security posture across four critical domains, combining results into a single weighted security score based on CVSS methodology. Each module targets a different aspect of organisational risk.

| Data Discovery | App Security | Cyber Essentials | System Security |
|---|---|---|---|
| 35% Weight | 20% Weight | 25% Weight | 20% Weight |
| Scans files for sensitive personal, financial, and credential data across documents, spreadsheets, PDFs, and images. | Identifies installed applications with known CVEs using NVD, OSV, and CISA KEV databases. | Automated assessment against the UK Cyber Essentials 5 control themes for certification readiness. | Evaluates 11 Windows security configurations including Secure Boot, TPM, encryption, and RDP. |
| 100+ detection patterns<br>OCR for scanned documents<br>Compliance mapping | CVSS severity scoring<br>Exploit tracking (CISA KEV)<br>End-of-life detection | 5 control themes<br>Pass/Fail status<br>NCSC guidance links | 11 security checks<br>Split-view detail panel<br>Remediation steps |

## SENSITIVE DATA DISCOVERY

The Data Discovery module scans your file systems for sensitive personal, financial, and credential data. After scanning, it presents a business risk intelligence summary — not just raw findings.

- **Summary Cards** Instant visibility into sensitive file count, severity breakdown, top data category, riskiest location, and recommended next step.
- **Plain English Context** A 'What this means' banner explains findings in business language, not technical jargon.
- **Compliance Quick-Check** Maps findings directly to GDPR, PCI-DSS, UK DPA 2018, and Cyber Essentials requirements.
- **Verification Status** Each finding is marked as Verified, Review Suggested, or Manual Check Needed — not raw confidence percentages.
- **OCR Scanning** Reads text from scanned PDFs and images using Tesseract OCR, with optional GPU acceleration for 5–10x speed improvement.
- **Scan Comparison** Delta view shows what changed between scans — new findings, resolved issues, and persistent risks.

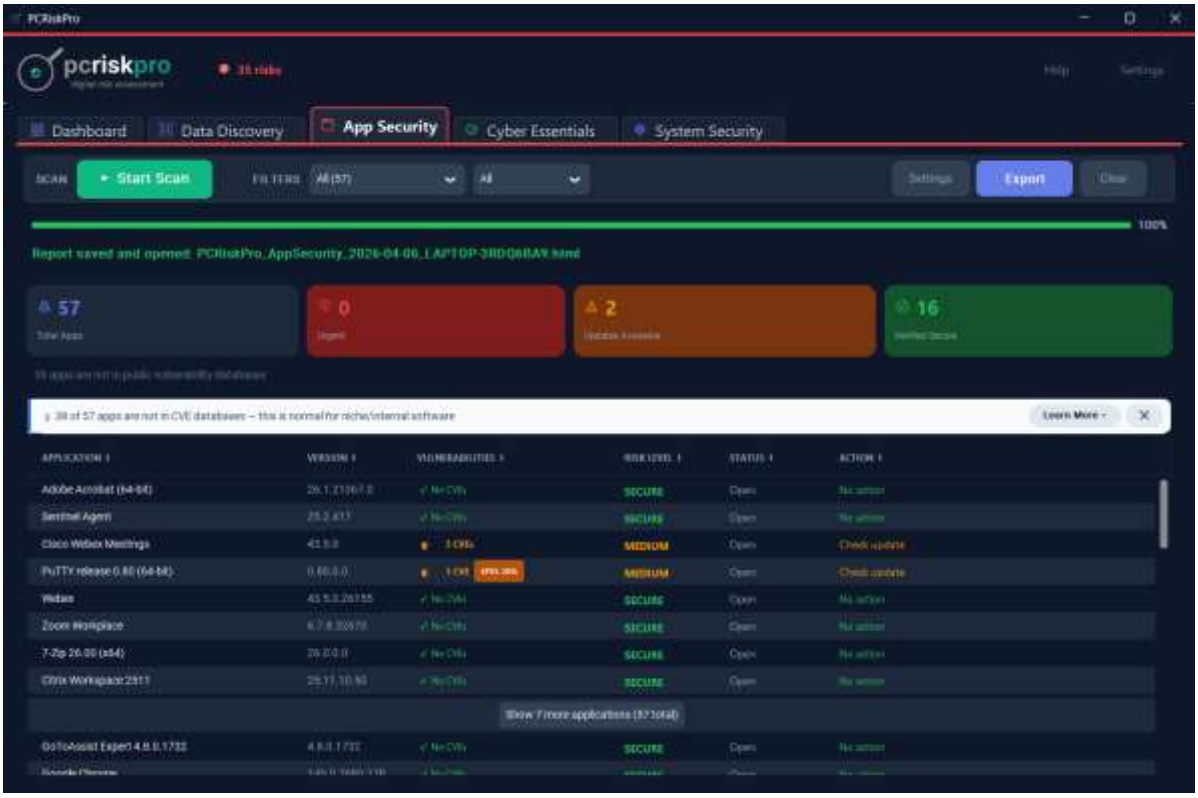
# APPLICATION VULNERABILITY ASSESSMENT

Automatically identifies installed applications and checks for known vulnerabilities using NIST NVD, OSV.dev, and the CISA Known Exploited Vulnerabilities catalogue.

- **CVE Detection** Cross-references installed software versions against three vulnerability databases with CVSS severity scoring.
- **Exploit Tracking** Flags applications listed in the CISA Known Exploited Vulnerabilities catalogue — the ones attackers are actually using.
- **End-of-Life Detection** Identifies software that is no longer receiving security patches.
- **24-Hour Cache** Results are cached locally so subsequent scans are near-instant, and the tool works fully offline.



*Application Security showing vulnerability severity, update status, and recommended actions*

## UK CYBER ESSENTIALS COMPLIANCE

Automated assessment against the UK Government's Cyber Essentials scheme — the 5 control themes required for certification. Ready for Cyber Essentials v3.3.

- **5 Control Themes** Firewalls, Secure Configuration, User Access Control, Malware Protection, and Security Update Management.
- **Pass/Fail Clarity** Each control shows a clear status with specific findings and NCSC remediation guidance.
- **Certification Readiness** Progress bar and scorecard show exactly where you stand before applying for certification.

## SYSTEM SECURITY CONFIGURATION

Evaluates 11 critical Windows security configurations that attackers commonly exploit, with a master-detail panel showing exactly what to fix and how.

- **11 Security Checks** Secure Boot, TPM, Credential Guard, SMBv1, UAC, ransomware protection, RDP, guest accounts, password policy, screen lock, and AutoPlay.
- **Guided Remediation** Each finding includes a 'Why it matters' explanation and step-by-step 'How to fix it' instructions.

## PROFESSIONAL REPORTING & EXPORTS

Generate executive-ready reports that communicate risk to non-technical stakeholders. Every export includes the weighted security score, module traffic lights, prioritised actions, and compliance status.

| Format | Best For | Features |
|---|---|---|
| Excel (.xlsx) | Analysis & tracking | Multi-sheet workbook with conditional formatting, pivot-ready data, and compliance mapping. |
| HTML | Stakeholder presentations | Interactive report with charts, risk visualisation, and print-ready layout. Shareable via email. |
| JSON | Integration & automation | Machine-readable structured data for SIEM integration and automated processing. |
| CSV | Quick data extraction | Simple tabular export for spreadsheet import and custom analysis workflows. |

## WHO PCRISKPRO IS FOR

- **SME IT Administrators —** Run internal security reviews with plain English guidance and prioritised remediation. Understand your risk posture in minutes, not days.
- **Managed Service Providers —** Assess multiple client environments efficiently. Generate professional reports that justify your security recommendations to business owners.
- **Compliance Officers —** Prepare for UK Cyber Essentials certification with automated control assessment. Map data findings to GDPR and PCI-DSS requirements.
- **Business Owners —** See your organisation's security posture summarised in one score. Understand what needs attention without needing technical expertise.

## LICENSING

PCRiskPro includes a perpetual **free trial with full scanning capabilities.** Paid licenses unlock professional exports, compliance evidence, remediation tracking, and scan comparison features.

| | Solo | SME |
|---|---|---|
| **Price** | **From £95/year** | **From £795/year** |
| **Devices** | 1 device | Up to 10 devices |
| **Best for** | Individual IT admins and business owners | MSPs and IT teams managing multiple sites |
| **Includes** | Full scanning + exports Remediation tracking | Professional features + Multi-device licensing |

## TECHNICAL SPECIFICATIONS

**Platform:** Windows 10, Windows 11, Windows Server 2019/2022/2025
**Architecture:** 64-bit native application (no browser or cloud dependency)
**Network:** Works fully offline; internet required only for initial CVE database population
**APIs:** NIST NVD, OSV.dev, CISA KEV (all cached locally with 24-hour refresh)
**OCR:** Bundled Tesseract OCR; optional GPU acceleration via EasyOCR + CUDA
**Security:** Code-signed with Certum OV certificate (RSA 4096, SHA-256 timestamped)
**Data Privacy:** No scan data leaves the device. All processing is local.
